### DETAILED ACTION

After mailing a restriction requirement, it was brought to the Examiners attention that a preliminary amendment was submitted canceling all but claim 21. Therefore a response to the restriction requirement is not necessary.

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 21 rejected under 35 U.S.C. 103(a) as being unpatentable over Murata.

21. A digital video processing method comprising the step of defining the distribution of blocks whose motion compensation values are zero as motion activity, with respect to inter frames. (See Murata column 2 line 53 through column 3 line 14)

At the time the invention was made, it was well known to those of ordinary skill in the art that there exists two types of motion compensation blocks within a frame, those with motion and those without. Furthermore each frame has a total number of frames.

Therefore if the number of motion frames is known and a threshold is set to determine if there is a large amount of motion within the frame by comparing the number of motion blocks, the corollary is also true. If one were to use the motion compensation blocks with no motion to determine motion activity by determining if the number of zero motion blocks falls below a threshold the end result would be the same. Therefore it would have been obvious to one of ordinary skill in the art, to define a distribution of blocks whose motion compensation values are zero as motion activity, motivated by the knowledge that either method could be used because the outcome would be the same. Furthermore since the

Art Unit: 2613

specification does not disclose that using the no motion blocks as opposed to the motion blocks has any particular advantage, or provides for an unexpected result, the use of them is considered a matter of design choice.)
